NOVA LIFE CYCLE MODEL

NOVA REKLAMCILIK DEKORASYON SANAYİ ve TİCARET ANONİM ŞİRKETİ by taking the necessary precautions, it has adopted the principle of constructing environmentally friendly buildings by minimizing environmental impacts in all components of the LIFE CYCLE SYSTEM together with its subcontractors.

In this framework, we take the necessary measures to ensure further conditions in the contracts it concludes with our subcontractors, as well as complying with the relevant legislation.

It is ensured that the best solutions are suggested/used by evaluating the environmental effects of alternative uses in the work of subcontractors.

As a result of this study, the energy consumption of life cycle stages and elements should be examined and the effects of even the least amount of materials on the total energy consumption of the building will be taken into account.
